

During the recent past years, there have been many and diverse extreme weather conditions that affect the economy and add risk to the investment projects.

2EN aims to minimize that risk and therefore continuously develops reliable systems that keep on performing measurements when everything else pauses or breaks.

System set-up

- hybrid lattice masts
- ultrasonic anemometers
- heated sensors
- automated power supply system
- management software
- online monitoring

Real time series measurements at altitudes above 1700m in very deep barometric that affected Greece during 30/01/2015-02/02/2015.

The measurements were performed by **2EN** with 45m masts from series **2EN-LAT Hybrid**.
